

Knowledge graph / data engineer (m/f/d)

welser
profile

Welser Profile with its 350-years history is an international metal-processing company that has over 2,300 employees and generates approx. one billion Euro sales per year. This family-owned company packed with implicit and explicit knowledge is waiting for you.

As a knowledge graph / data engineer your main responsibility is to co-develop a knowledge graph with special focus on business modelling for Welser Profile.

WE ARE LOOKING FOR YOU at the location Gresten (Lower Austria)

Your tasks:

- You support to set up the ETL process for the graph database.
- You support the data model / ontology development for the knowledge graph.
- You query the graph database to answer business-critical questions.
- You deploy and maintain the knowledge graph.
- You carry out graph data science activities (centrality, similarity, link prediction).

Your profile:

- You have
 - a strong background in database technology.
 - experience with the deployment of software solutions.
 - expertise in real-time data integration and big data (Spark, Kafka, etc.).
- You may have
 - knowledge of graph databases.
 - a background in the mathematics of graphs.
 - initial experience in data science.
- and actually a well-connected head.

What we offer you:

- you work in an innovative team consisting of data scientists, supply chain experts and creative thinkers.
- your team reports directly to main decision makers within the company.
- you will be part of an exciting journey developing the first knowledge graph within a traditional company producing for a broad set of industries.
- in this unique position you gain key insights and skills in one of the most trending topics of Gartner's Hype Cycle for AI.
- an attractive salary based on the collective agreement of the metalworking industry – for this position a minimum salary of € 3.310,48 gross per month is foreseen (for master degree).
- flexible working hours and the possibility for remote office / co-working office.
